Dear Mr. Gannon:

I am writing to express my complete support of the proposed Jordan Reservoir Nutrient Strategy. I support any rules and regulations that protect our water supply. I know you will receive a lot of letters from my city of Greensboro and developers crying how if the rules are implemented it will kill growth in our area. We both know this is another example of the little boys crying wolf once again. The same groups of people said exactly the same thing when clean air rules were being discussed. And again when the Randleman Reservoir protection rules were proposed. Gee, after both sets of rules were adopted, we have seen unprecedented growth in Guilford County. I doubt growth will slow here if the rules are adopted.

It is the responsibility of everyone in a community to protect the water as it flows downstream. I imagine if Guilford County was in the same position as Wake and Durham Counties, our elected officials would be fully supporting this strategy. We are the headwaters of everyone else but the developers and our City Council, consisting of developers and bankers, don't care if we make the water downstream dirty. All they see are dollar signs.

Please put me into the public record as being fully supportive of the Jordan Reservoir Nutrient Strategy.

Thank you;

David E. Sullivan
